

### Josab Hungary receives million order within Waste Water through business partner

Josab Hungary has received an order from Indufil Hungária Kft., a business partner in tank and filter solutions for industrial purposes. Josab's share of the project amounts to approximately SEK 1.4 million. The project will start immediately, and the facility will be ready for operation during the second quarter of 2021.

The final customer for the joint project, MONO Ipolyfabric KFT. manufactures painted and surface-treated interior details for the automotive industry. In these processes, large amounts of heavily polluted and environmentally hazardous water are created, which must be treated as hazardous waste with high costs as a result in the form of transport and handling costs.

Through the solution that Josab developed with Indufil, the hazardous substances in the water are sedimented and absorbed and the concentrated amount of hazardous waste can be stored in special tanks from Indufil, and thus does not need to be transported as often, and remaining water can be reused, which greatly reduces the company's environmental impact and costs of this handling.

Norbert Udvardi, CEO, Josab Hungary Kft, says: *"the project is a breakthrough in the Wastewater area for Josab and once again demonstrates a new area of use in the environmental area for our Aqualite™ technology, and we look with confidence at the collaboration with our partner in most projects in the future"*.
